BANK LOAN ANALYSIS REPORT

PROBLEM STATEMENT

DASHBOARD 1: SUMMARY

The bank needs a smart report to track loan activities and overall performance. This dashboard helps understand how loans are performing and how the business is growing over time. It gives clear information about applications, funded money, repayments, interest rates, and borrower financial health.

This report helps management to:

- Make better business decisions
- Track monthly growth
- Monitor loan quality
- Reduce risk
- Improve lending strategy
- Understand customer trends

Key Performance Indicators (KPIs)

1. Total Loan Applications

This shows the total number of loan applications received by the bank.

It helps measure customer demand for loans.

Also track:

- MTD (Month to Date) Applications
- MoM (Month over Month) Growth

2. Total Funded Amount

This shows the total loan money approved and given to customers.

It helps understand how much capital the bank has invested in loans.

Also track:

- MTD Funded Amount
- Monthly growth changes

3. Total Amount Received

This shows total money received from customers as repayment.

It includes:

- EMI payments
- Principal recovery
- Interest collection

It helps track cash flow and repayment performance.

4. Average Interest Rate

This shows the average interest rate charged on all loans.

It helps understand:

- Loan pricing strategy
- Profit margin
- Changes in lending rates

5. Average Debt-to-Income Ratio (DTI)

DTI shows how much debt customers have compared to their income.

Lower DTI means healthier borrowers.

This helps the bank check repayment ability.

6. Good Loan vs Bad Loan Analysis

The bank wants to divide loans into two groups:

Good Loans

Loans with status:

- Fully Paid
- Current

These customers are paying properly.

KPIs:

1. Good Loan Percentage: Shows percentage of healthy loans.

2. Good Loan Applications: Total number of good loan customers.

3. Good Loan Funded Amount: Total money given in good loans.

4. Good Loan Amount Received: Total repayment received from good loan customers.

Bad Loans

Loans with status:

- Charged Off

These loans are risky and not recovered fully.

KPIs:

1. Bad Loan Percentage: Shows percentage of risky loans.

2. Bad Loan Applications: Total bad loan accounts.

3. Bad Loan Funded Amount: Money given in risky loans.

4. Bad Loan Amount Received: Money recovered from bad loans.

7. Loan Status Grid View

This section shows performance based on loan status.

It includes:

- Total Applications
- Funded Amount
- Amount Received
- Interest Rate
- DTI
- MTD Performance

This helps compare each loan category.

DASHBOARD 2: OVERVIEW

This dashboard uses charts to understand trends and patterns visually.

1. Monthly Trend by Issue Date (Line Chart)

Shows monthly trend of:

- Loan Applications
- Funded Amount
- Received Amount

Helps identify:

- Growth trend
- Slow months
- Seasonal demand

2. State Wise Analysis (Map Chart)

Shows loan performance by state.

Helps identify:

- High demand states
- Low performing regions
- Expansion opportunities

3. Loan Term Analysis (Donut Chart)

Shows loan count by term:

- 36 Months
- 60 Months

Helps understand customer preferred repayment duration.

4. Employment Length Analysis (Bar Chart)

Shows loans based on borrower work experience.

Examples:

- 1 year
- 5 years
- 10+ years

Helps analyze job stability impact.

5. Loan Purpose Analysis (Bar Chart)

Shows why people take loans.

Examples:

- Debt Consolidation
- Credit Card
- Home Improvement
- Business
- Education
- Vacation

Helps understand customer needs.

6. Home Ownership Analysis (Tree Map): Shows loans by home ownership type:

- Own
- Rent
- Mortgage

Helps study customer financial background.

DASHBOARD 3: DETAILS

This dashboard gives complete row-level loan information.

Users can check each customer record clearly.

It works like a detailed loan database report.

Includes:

- Loan ID
- Customer State
- Income
- Loan Amount
- Interest Rate
- Loan Status
- Grade
- DTI
- Purpose
- Payment Details
